

Corporate Plan Performance Reporting has never been easier.

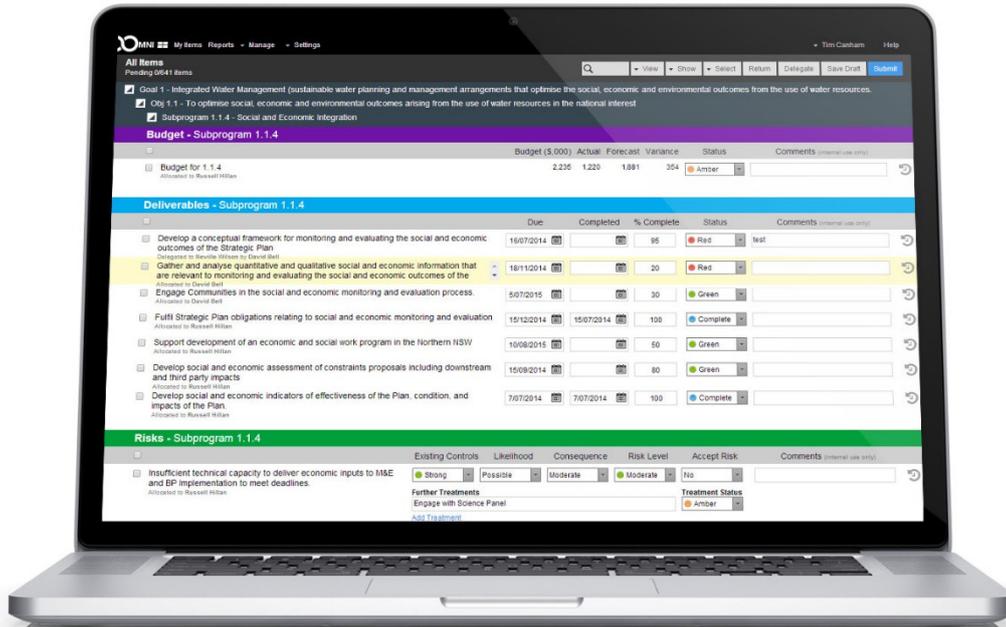

Omni manages corporate performance reporting of deliverables, risks, KPIs, budget and other performance measures within your corporate plan.

Omni is available as part of Torque Software's Financial Management Compliance System.

---

If you would like more information about Omni, or would like a demonstration, please [contact Torque Software](#).

## Online and Centralised

**Omni** is a web application making enterprise performance reporting a simple and transparent process and giving staff what they need, when they need it.

## Performance Indicator Reporting

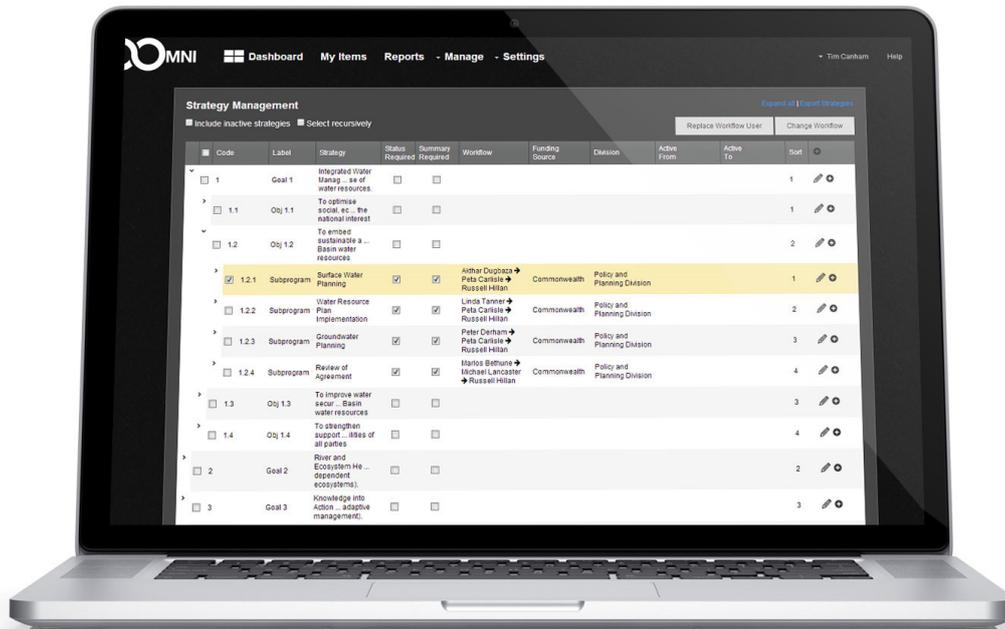

**Omni** is readily customisable and allows collection of performance status from relevant users through a simple and intuitive interface.

## Intuitive and Workflow-Driven

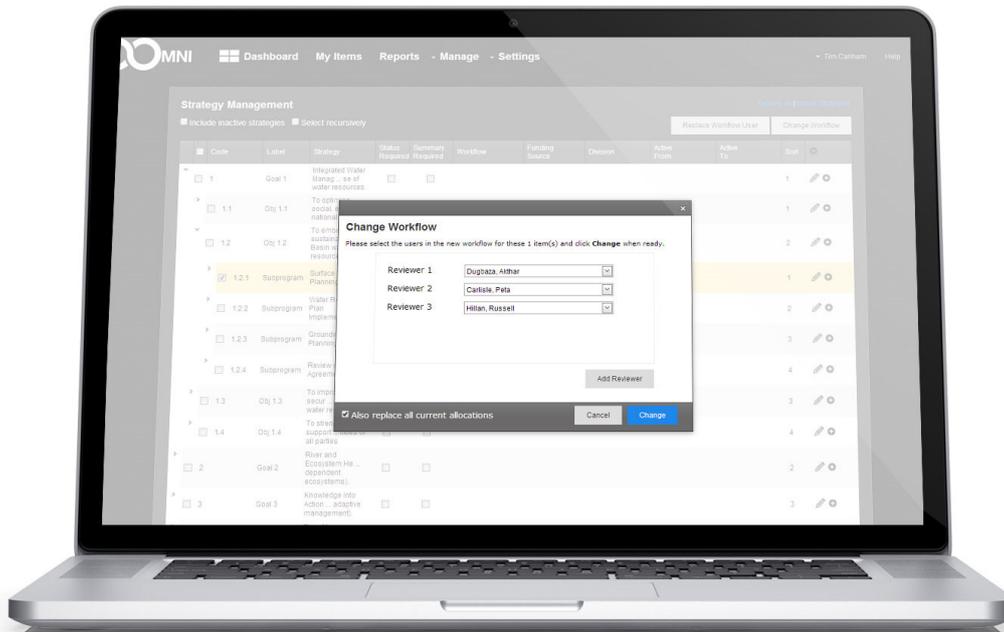

**Omni** eliminates the difficulty of collating spreadsheets and word documents, using review steps via a workflow process defined by you.

# How does Omni work?

- Omni allows you to record your corporate plan to as many levels as required. E.g. Goals, objectives, programs, key actions.
- Deliverables, risks, KPIs, budget and other performance measures are then linked to the appropriate part of the corporate plan.
- The workflow for reviewers (if required) are nominated for all the deliverables, risks, KPIs, budget and other performance measures.
- Users are informed when it is their turn in the workflow to enter or review performance status updates. Users can see the status and review history of any deliverable, risk, KPI, budget and other performance measures, at any time.
- Reports are then generated using the completed and reviewed performance status indicators.

# Features and Benefits

- Automatic notification and reminder emails are sent to staff responsible for entering performance information. These emails are sent cyclically based on the required timeframes for reporting. Staff only need to click on the link in the email to go straight to their personal view of the performance reporting information for which they are responsible.
- Standardised way to enter information that is user friendly and simple to use.
- Validation of all information entered to ensure accuracy and consistency.
- Flexible definition of corporate plan breakdown, e.g. goals, objectives and programs, which are then linked to performance reporting information to enable grouping by corporate plan items.
- Removal of the need to manually collate spreadsheets. Performance information is stored centrally in a database and any particular piece of information is only stored once.

- Staff can easily make updates late in the reporting cycle if required with minimal rework of the collated performance information.
- Quick and simple import/export of performance indicators and other information.
- Strong security ensuring only authorised staff have visibility of performance information relevant to them.
- Export of structured performance information into Excel that can be easily used to develop additional detailed and summary reports.
- Integration with the FMCS to obtain organisation structure and user information.

## Link to FMCS

Omni is a module within Torque Software's Financial Management and Compliance System (FMCS) and is hosted on the same physical infrastructure as the FMCS.

This has the following advantages:

- The FMCS is already implemented and many users are already using the FMCS. This allows Omni to be more easily and quickly deployed.
- Omni uses the same user list and organisation structure as the FMCS. These are maintained by the FMCS administrators. Therefore you do not need to maintain an extra set of users or organisation structure.

## Hosting with Torque

Host with Torque to receive these additional advantages:

- The hosting service is already proven and reliable and meets all security requirements.
- No action, support or involvement is required from your internal IT group. Omni is a part of the FMCS and Torque Software provides all required support.
- Staff using FMCS will log on with the same user id and password when using Omni, and vice versa.
